Protect|ED Forges Exclusive Partnership with WellAir to Boost Indoor Air Quality in Schools Across the Country

Protect|ED, a pioneering indoor air disinfection and purification solutions provider, is thrilled to announce an exclusive educational partnership with WellAir. This collaboration marks a significant step forward in fostering healthier and safer school environments, prioritizing the well-being of students and staff alike.

Under this partnership, Protect|ED gains exclusive rights to distribute Novaerus portable air disinfection solutions to K-12 institutions, early childhood education centers, and higher education establishments.

Lindsey Wagner, Chief Development Officer for Protect|ED, emphasizes, "Clean air isn't just a nice-to-have; it's a fundamental requirement for learning. The link between air quality and cognitive function is well-established. Our partnership with WellAir underscores our commitment to ensuring that students have access to the best learning environments to support their academic success."

Throughout a child's K-12 education, they will spend over 15,000 hours in school facilities. Despite diligent cleaning efforts, classrooms, cafeterias, libraries, and gyms can harbor biological and chemical contaminants, leading to illness and increased absenteeism.

WellAir's portable air cleaning devices, deployed in thousands of school buildings nationwide, offer a low-maintenance, easy-to-install solution that effectively combats airborne pathogens and pollutants. These devices not only help to reduce the risk of infection but also contribute to a healthier indoor environment, ultimately curbing absenteeism and fostering academic success.

Kevin Devlin, CEO of WellAir, expresses confidence in the partnership, stating, "Protect|ED has established itself as a trusted and valued air quality partner to schools. We are excited to deepen our relationship with the team and are confident that this collaboration will lead to healthier and safer educational environments throughout the country."

Together, WellAir and Protect|ED are poised to revolutionize indoor air quality in educational settings, ensuring every student can thrive in a safe and healthy learning environment.
